## Tokyo Electron Device— Pioneering a New Era with **Semiconductors and IT Infrastructure**

## **Electronic Components Business**

The Electronic Components Business handles a lineup of semiconductor products, circuit boards and software from more than 40 companies, mainly leading overseas manufacturers.

Based on strengths such as the ability to propose solutions to customer problems and offer finely tuned sales support, along with sophisticated technical support provided by skilled engineers, our products are used in a wide range of final products, predominantly those of major appliance and electronics manufacturers.

The Electronic Components Business includes the Private Brand Business, through which we are working to establish high value-added businesses in such areas as contracted design and production services tailored to customer needs and the development of private brand products. In this way, we aim to achieve sustainable growth by diversifying our businesses.

## **Computer Networks Business**

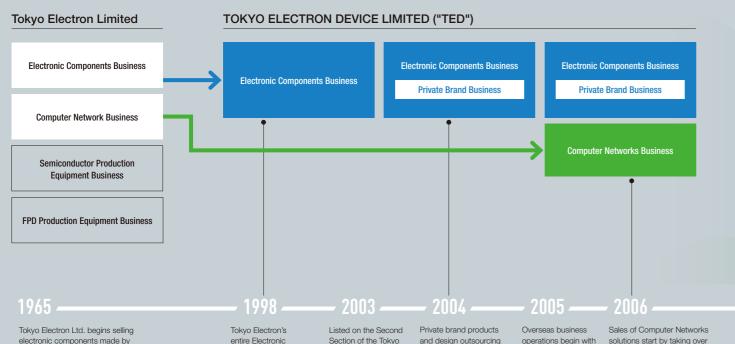

The Computer Networks Business handles products from more than 20 companies, mostly North American IT manufacturers with unique technologies.

With a lineup of innovative and highly specialized network, storage, server and other devices and cutting-edge security products, we propose business solutions for the cloud era to IT service companies in Japan, data center operators and other customers.

Leveraging our technical capabilities, including finding optimal combinations of equipment based on technology verification, we provide solution proposals, maintenance support, as well as operational and surveillance support services for security products through our security operation center (SOC).
